

Juan Leal

Hamilton, ON · juanesleal99@gmail.com · +1 (647) 779-9920 · linkedin.com/in/juanesleal · github.com/juanesleal

Computer Systems Engineer with 2+ years of experience in embedded systems, firmware development, and enterprise automation. Proficient in C/C++, Python, and Linux-based environments.

Experienced across the full software development lifecycle from low-level firmware (ARM Cortex-M, RTOS) to cloud-integrated workflows (Power Platform, Microsoft 365).

Eligible for CGP clearance. Open to remote or relocation.

TECHNICAL SKILLS

Languages: C, C++, Python, Java, SQL, Verilog, Rust, JavaScript, Vue.js

Embedded & Firmware: Embedded C/C++, ARM Cortex-M, RTOS, RS485, JTAG/GDB, Circular Buffers, Firmware Optimization

Networking: TCP/IP, REST API, Wireshark, VLANs, Wi-Fi, Network Security Protocols

Platform & DevOps: Linux/Debian, Docker, Git, Power Platform (Power Automate, Power Apps, Copilot Studio), SharePoint, Graph API

Tools & Methods: Agile/Scrum, AutoCAD, Active Directory, DNS, PowerShell, Object-Oriented Design

Languages spoken: English (Native), Spanish (Native), French (Advanced)

EXPERIENCE

Jr. AI, Security, and Automation Analyst · City of Hamilton

Sept 2025 – April 2026

Hamilton, ON

- ▶ Designed and delivered Power Platform solutions (Power Automate, Power Apps) automating recurring operational workflows, reducing manual data-entry effort across multiple departments.
- ▶ Built Copilot Studio integrations to streamline knowledge workflows and extend automation capabilities across Microsoft 365 services.
- ▶ Developed and maintained connectors and pipelines (Dataverse, SharePoint, Teams, Graph API) enabling reliable, real-time data flows between internal systems.
- ▶ Authored governance and ALM policies for Power Platform deployments, including solution packaging, environment strategy, and rollback procedures, reducing deployment risk.
- ▶ Performed root-cause analysis on automation incidents; implemented preventive controls that reduced recurrence and improved SLA compliance.
- ▶ Produced technical documentation and runbooks for automated processes and Copilot configurations to support maintainability and team handover.

Software Engineer · Infiniti Electro-Optics

Nov 2023 – Oct 2024

Cranbrook, BC

- ▶ Integrated embedded systems with Ethernet and RS485 serial networks, designing communication layers optimized for low-latency data exchange in field-deployed hardware.
- ▶ Implemented a structured logging system on an ARM Cortex-M controller using a 256-byte circular buffer and compact binary format, cutting log overhead while preserving actionable debug traces.
- ▶ Automated JTAG/GDB test scripts to reproduce firmware faults and capture trace dumps, accelerating defect resolution cycles.
- ▶ Configured and validated network infrastructure (managed switches, VLANs, Wi-Fi) ensuring correct device segmentation and secure device-to-device communication.
- ▶ Led firmware optimization for system compatibility and cost efficiency; proactively resolved potential issues before hardware assembly, reducing rework.
- ▶ Performed network diagnostics using Wireshark and custom logging tools to isolate packet loss, latency spikes, and configuration faults.

Software Engineer Intern · *RadicalX*

Oct 2023 – Dec 2023

Remote

- Contributed features to the RadicalX platform including the Missions module, subscription/payout systems, and AI Manager integration using Agile sprint cycles.
- Delivered consistent, review-ready code across sprints; provided peer code reviews and collaborated cross-functionally to unblock team members and maintain velocity.

EDUCATION

B.Eng., Computer Systems Engineering

June 2023

Carleton University · Ottawa, ON

CERTIFICATIONS

- PCEP™ – Certified Entry-Level Python Programmer - 2025
- WHMIS Certification - 2025
- Health and Safety Certification - 2025
